The xs:annotation element is used to document a schema. It can take two elements (e.g., HTML elements) to structure or format the documentation. The sample schema Duration Type allows the schema author to insert elements.

Data types used in the IBM® Cognos® schema are mapped.

Operators 3.1 introduces a new type, xs:numeric, that is a union of xs:decimal, xs:float, and xs:double.

This document describes the XML Schema namespace.

Each XML schema type is mapped to an SDO type. Use this mapping to Mapping XML schema definitions to the SDO type system duration, java.lang.String.

XSD Validation Error - posted in Schema: Hi All, My following XSD is not getting
xsd:annotation
xsd:attribute name="v" type="xsd:date" use="required"/
wsdl:types
xsd:schema name="duration" type="xsd:string"/
xsd:element maxOccurs="1".

How do we make integer datatype behave like String data type in XML/XSD? XML Type EMF model from XML Schema fails if duration has default value. The xs:date data type is used to represent date in YYYY-MM-DD format. Each component is The xs:duration data type is used to represent time interval.

There are 3 QA scripts and 3 conversion scripts registered for this schema.
